

Premium Sand Tray with Lid

The Play Therapy Supply Premium Sand Tray with Lid was designed and constructed with the highest-quality materials and craftsmanship. It will give you years of use if properly maintained.

Cleaning:

The textured interior surface can be cleaned with a cloth towel wet with warm water and a mild detergent (such as a very small amount of dish soap diluted in water). No bleach should be used. For tough dirt in the textured area, a soft-bristled brush can be used with a mild detergent to gently remove.

The wood exterior should be cleaned and polished as needed with a quality wood polish and cloth or microfiber towels. To prevent damage, never use paper towels to clean your tray.

Wet Use

The waterproof interior barrier allows the sand tray to be used with moist sand. After a day's use as a wet tray, always remove the wet sand and dry the tray with a towel. Never store the tray overnight with wet sand. Long-term exposure to moisture can warp the wood, the lid, and cause mold.

Never get the exterior of the tray or the lid wet. If a spill occurs, clean up immediately.

Safety

Before use, always make sure the tray is anchored on a stable surface with no possibility of slipping off. We recommend the Play Therapy Supply premium sand tray stand as it holds the tray firmly in all corners.

A tray filled with sand is heavy and can cause injury if used on an unstable surface. This tray is designed for professional use in a therapeutic setting only, supervised by a clinician. It is not a toy.
